

UNKNOWN FACTS ABOUT ISDN

THE IMPACT IS NOW.

In 2015, BT announced that all ISDN and PSTN services would be switched off by 2025.

Already, large parts of the UK can no longer receive new ISDN provisions and several OpenReach Exchanges have been impacted. Check out the detail below to see known milestones of when changes are coming; your area may have already been affected, but more dates will be added by BT in the coming months, which Mode will update you on.

The switch off not only affects your telecommunications, but could also disrupt your alarm systems, PDQ machines and lifts, interrupting more than just your business communications.
